

Applications

Residential Use

Carbon cartridges used as part of a water treatment system, improves water quality by removing harmful contaminants from municipal water supplies.

Pre-treatment to Reverse Osmosis (RO)

Provides protection by removing contaminants such as chlorine and organics that can foul RO membranes.

Point-of-use (POU) Drinking Water Systems

Cartridge provides a source of clean water and is more cost effective than purchasing bottled water. It can be used as a standalone filter to reduce or eliminate: bad tastes and odors, chlorine and organic contaminants in municipal water supplies. The use of carbon cartridges significantly improves drinking water quality.
