

Applications

Drinking Water

Carbon / KDF® cartridges are used in a variety of pretreatment or primary treatment for home and commercial drinking water systems. The use of this filter extends the life of existing cartridges and reduces cost by reducing the frequency of filter change outs.

Private Wells

KDF® media are incorporated into combinations with carbon and other matrices for bacteria control and scale reduction for treating contaminants in water.

Reverse Osmosis and Deionization Systems

This cartridge protects RO systems from chlorine degradation, and ion exchange media from bacterial contamination, extending the life of the systems components and reducing operating cost.
